University of Michigan & Environmental Health Ergonomic Intervention Study

enhanced **ERGONOMIC** awareness

BEFORE Ergonomic Intervention

Tractor mowers such as the one in this photo were lifted by a floor jack to be serviced. The mechanic was required to lie on the ground under the mower in order to perform repairs and maintenance.

AFTER Ergonomic Intervention

The Mohawk Turf Package has allowed for ground care maintenance vehicles to be lifted easily to the height of six (6) feet. The mechanic now has unrestricted under-vehicle access while standing to perform repairs and maintenance.

The turf package easily converted the existing Mohawk hydraulic auto lift into a multi-purpose lift.

Testimonial:

“The Mohawk Turf Package has made a world of difference. It is easier to service lawn maintenance equipment since you can see better, the equipment is more secure on the lift than the floor jack, but most importantly there is no more lying on the floor in awkward positions for the back and rest of the body.”
